

MacPhee's

Anabel Gomes speaks to Tania MacPhee, co-founder of MacPhee's, for the wine enthusiast.

▣ What is special and unique about your design within your range of wine cabinets?

▣ EuroCave invented the first wine cabinet in Lyon, France, in 1976 and today produces the world's best wine fridge encompassing the latest in technology, greatest features, highest capacity and aesthetic appeal. EuroCave's passion for perfection and quest for excellence is the reason why EuroCave wine cabinets are in more five-star hotels, chateaux, leading

wineries and restaurants than any other wine cabinet in the world.

Where are your wine cabinets made?
In France.

What are the points of difference with your wine cabinets?

Firstly, there's the flawless temperature and humidity control: EuroCave's exclusive "Twin Process" temperature regulation system and "Hygro" humidity control system means the cabinet heats

and cools to maintain perfect conditions in any room, including unheated garages or basements.

They are also handcrafted in France to the highest possible standards. Each EuroCave wine cabinet is beautifully hand-crafted with 5cm thick expanded CQI insulation (equivalent to 2m of earth) and "stipie" aluminium interior (for better conductivity and maintaining humidity), offering the highest standard of performance and stability.

Easy to use shelving ensures maximum capacity and convenience. EuroCave's unique roller mounted and adjustable shelves ensure maximum capacity and convenience for various bottle sizes.

Also on offer is the unique alarm system so that you are alerted if the humidity levels fall below the threshold limit of 50 per cent, thus avoiding any possibility of damage to your corks.

Mounted on vibration free "silent" blocks, EuroCave is the quietest wine cabinet on the market.

Lock and key security as well as protection alarms on certain EuroCave ranges warn of any temperature fluctuations outside normal parameters.

EuroCave subscribes to the objectives of sustainable development. For example, the EuroCave wine cabinets and cellar conditioners use a CFC-free cooling liquid that respects the ozone layer, whilst the wood used in the racks comes from plantations approved by the SGS Audit Program.

What is one of your favourite Australian wines?

Steve Pannells's Pronto Bianco. And I'm loving Italian wines these days—those yummy savoury tannins!
